 **FAUN[®]**
TRACKWAY

OUR HERITAGE

FAUN Trackway Limited has a prestigious reputation, with over 75 years' experience in the design and manufacture of premium products and tailored solutions. Originally Saunders-Roe based on the Isle of Wight, we relocated to Anglesey during the 1940s, and later in 1968, we became Laird (Anglesey) Ltd. In 1996, we were acquired by the KIRCHHOFF Group; a family-run, German group of engineering and manufacturing companies that have been providing innovative solutions for over 220 years.

With a heritage rich in engineering, we are renowned for our skills in fabrication, welding and painting, enabling us to work on complex, innovative and large scale projects across an array of industries, such as Nuclear, Energy, Defence and Disaster Relief. Our esteemed partnerships and collaborations coupled with our skilled workforce ensure we are trusted with delivering complete and cost-effective results; whilst our passion in safety, quality, and the environment lead to a culture of innovation and continuous improvement. We are proud to hold ISO 9001, 14001, and 45001 accreditations.

DESIGN SUPPORT

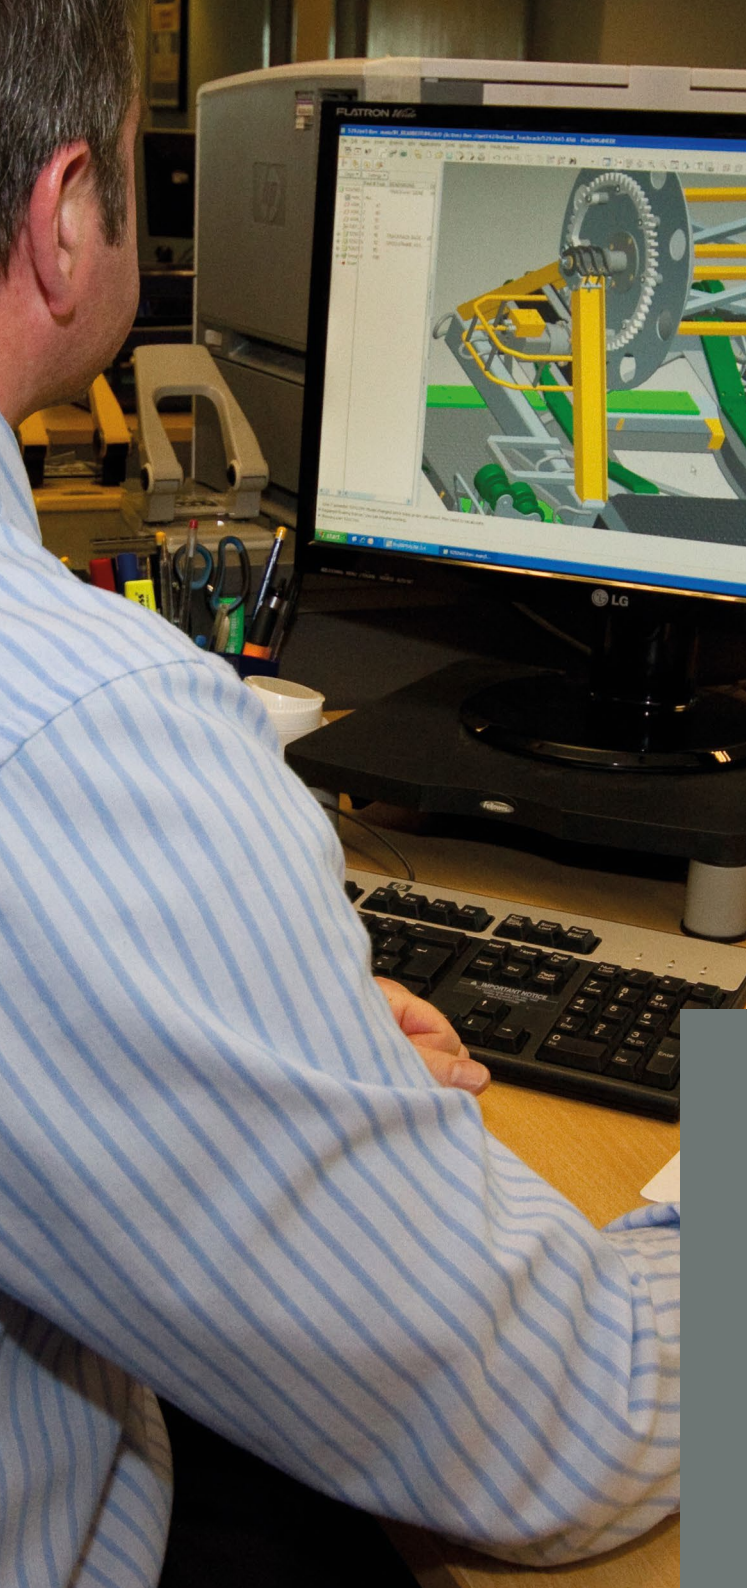

FAUN Trackway Limited stands at the forefront of engineering innovation, driven by a team of expert 2D and 3D CAD design engineers with a proven track record. Every product is meticulously designed and tested in-house, supported by tailored documentation, CE marking, and Human Factor Engineering to ensure optimal usability and compliance.

With extensive experience across mechanical, hydraulic, electrical, and pneumatic systems, we offer rapid prototyping and end-to-end design solutions that meet the most demanding operational requirements.

Each project is guided by a robust development framework, including:

- ✓ Design for Manufacture
- ✓ Finite Element Analysis (FEA)
- ✓ Supply Chain Management
- ✓ Function Testing
- ✓ On-Site Handover

This holistic approach ensures reliability, performance, and seamless integration from concept to deployment.

FACTORY

Our 26,900m² premises boasts two external secure storage areas and a large, multifunction production area, enabling us to handle large structures; from full fabrication, to final assembly. With large access doors and 6 tonne gantry cranes, we have an internal lifting capacity of up to 12 tonne.

WELDING

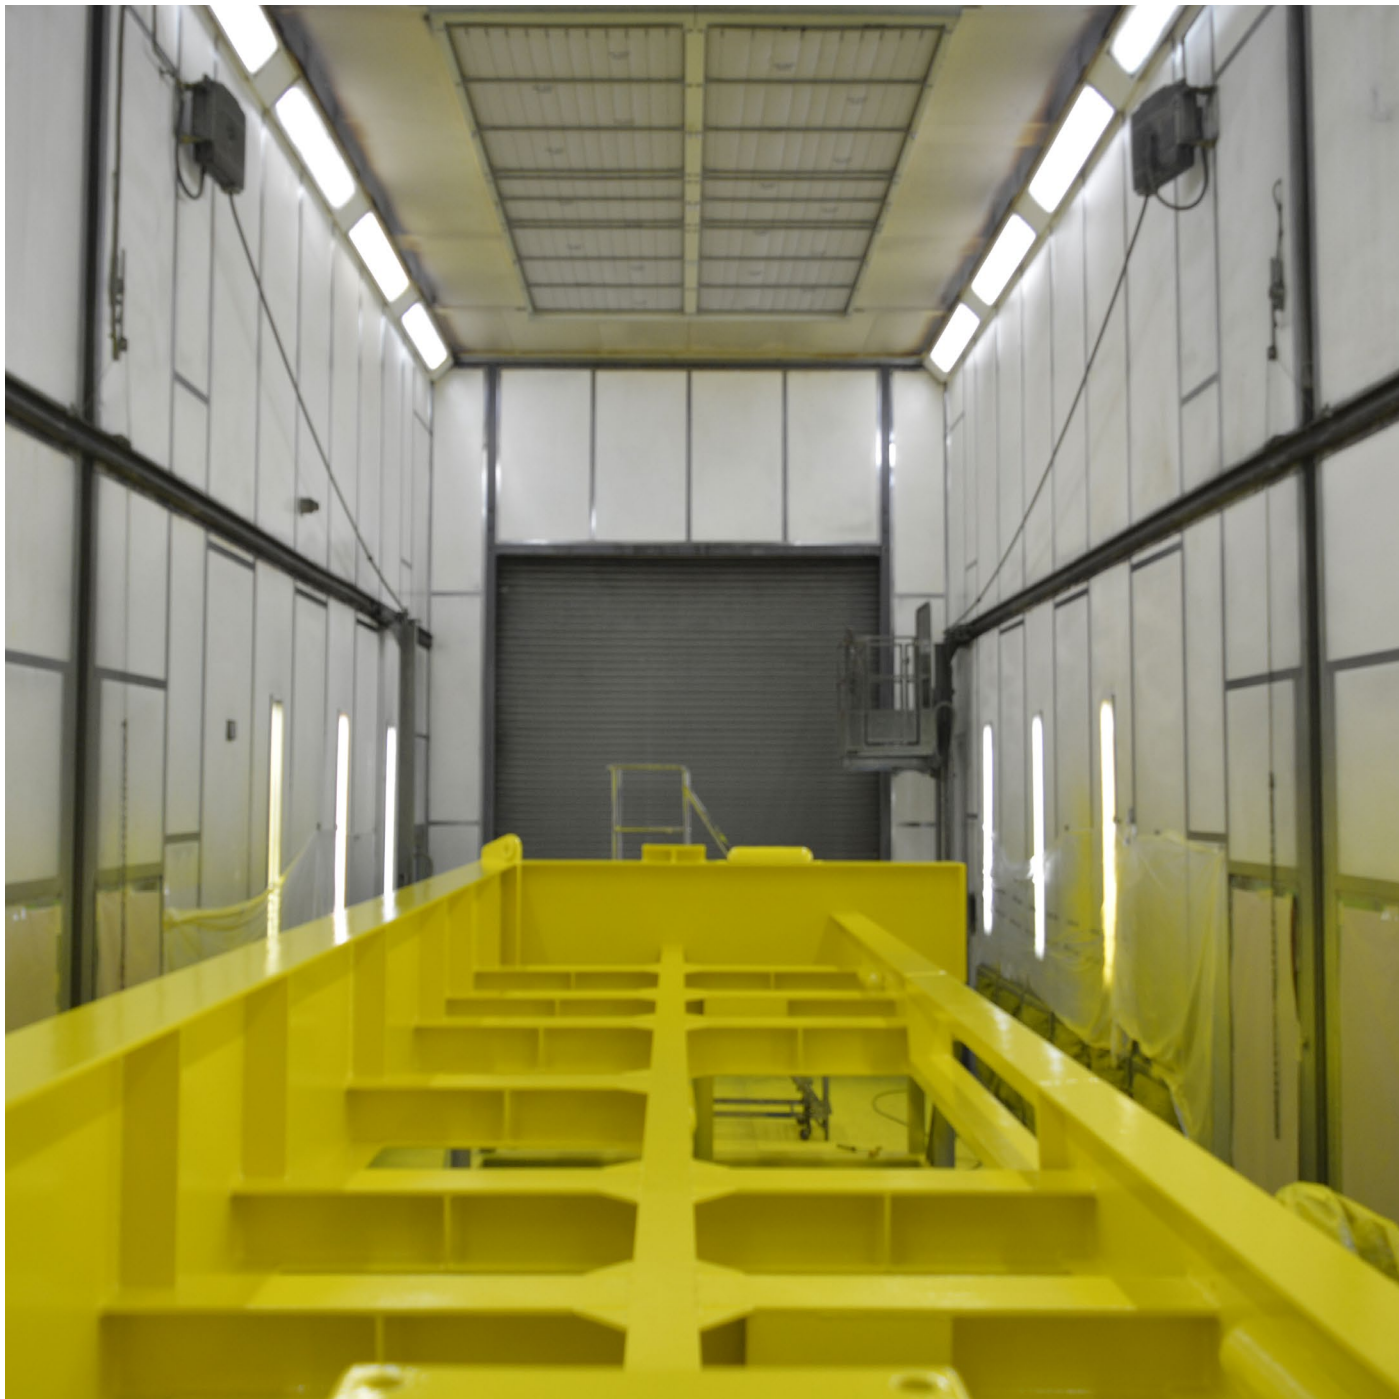

We are proud to offer advanced welding and fabrication services, delivered by a dedicated team of highly experienced carbon steel and aluminium welders. All welding operations are carried out in accordance with BS EN ISO 3834-2021, ensuring the highest standards of quality and consistency.

Our skilled professionals specialize in complex fabrications, supporting bespoke and large scale structural assemblies tailored to demanding applications. From precision components to heavy duty frameworks, we deliver engineered solutions that meet rigorous performance criteria.

Our certified welding engineers and inspectors are qualified to perform visual weld inspections to PCN Level 2. We also provide comprehensive non-destructive testing services, including Magnetic Particle Inspection (MPI) and Ultrasonic Testing (UT). In addition, our facilities support proof loading up to 300 tonnes, verifying the integrity and load-bearing capacity of critical components.

PAINTING

Our team of ICAT accredited painters produce high grade finishes and specialist coatings, meeting the demands of all customer requirements. Using water-based and two-pack paint systems, with grit blasting preparation, we are proud to offer an array of coatings, including:

- ✓ Anti-Skid – Enhanced traction and safety
- ✓ Flame Retardant – Fire-resistant protection
- ✓ Chemical Agent Resistant Coating (CARC) Compliant with DEF STAN 00-72
- ✓ Infrared Repellent (IRR) Compliant with DEF STAN 80-208
- ✓ Marine Coatings Certified to NORSOK standards

On site, our 18.4m (L), 5.5m (W), 7.5m (H) high temperature baked paint booth is capable of housing a double decker bus, and can be divided into two sections for flexibility. The paint booth also boasts housing lifts for painting at height, under floor access, and a heavy rail system for ease of manoeuvring fabrications of up to 20 tonnes.
